

**AUTOMATION AND ROBOTICS.**

## SMART FACTORY. AND INTERNET-OF-THINGS.

Smart Factory and Internet-of-Things are those global megatrends that will lead to the next industrial revolution. The impact on Automation solutions and robotics will be tremendous. BRUNNER contributes with focused innovation that empowers own products and customer solutions, to enable full digitalization and networked business processes.

We investigate this ongoing innovation and technological changes open minded. It's our innovation spirit, our strong product and technology offering and our dedication towards our customer's individual need which makes us your partner of choice for your most modern automation and robotics solution.

## FACTORY OF THE FUTURE.

A customer buys a product. It takes a blink till the manufacturer of the product, all his suppliers and the logistics partners gets an automatic notification about that buying decision. The networked computers and processes of all partners react immediately and adjust the flow of material, goods and services accordingly to achieve the most economic and efficient production and delivery of the product to the customer.

That's the vision behind Smart Factory. BRUNNER supports this industrial transformation via focused Innovation Projects with our customers and partners.

## BRUNNER AUTOMATION & ROBOTICS.

Our modern and powerful Drive and Control products are key enabling technologies and success factors to our customer's projects and intelligent process-oriented drive solutions. A rapidly advancing industrial digitization and trends like smart factory and the Internet-of-Things are challenges and prospects we enthusiastically incorporate and transform into true innovation for our customers and partners.

We develop controls & drives that allow a fast and precise positioning and synchronized movements that support highest system dynamics in an intelligent system network.

It's all about our customer's success. BRUNNER develops and manufactures customer and application specific solutions that perfectly integrate into our customer's processes and systems. Supported by our professional engineering team and always in close dialog with our customers we create and evaluate a comprehensive approach which includes all aspects of the target application of our products as well as the operational environment.

## BRUNNER CONTROL LOADING SYSTEMS.

BRUNNER has developed a portfolio of innovative Control Loading Systems. Our long-lasting experience with cutting edge Drive and Control technologies and our passion for aviation created solutions that allow the representation and support of multitude aspects of related to physical-men-machine interaction. All our solutions are fully software controlled and configurable.

The spectrum of applications for our Control Loading Systems is huge and impressive. It ranges from complex industrial and medical automation applications to high-precision robotics and addresses also the domain of professional Flight Simulation for Pilot Training.

## BRUNNER INSIDE.

We want our customers to be successful. Contributing to our customer's success with our strong Professional Services Team, our modern Production Infrastructure and mostly with our commitment towards highest quality is our biggest aim. That is what motivates us and makes us proud.

## CUSTOMER ORIENTATION.

Customer Orientation. That's what drives us to develop and produce customer and application-specific solutions that perfectly integrates into the processes and system environments of our customers.

Always based on an open and trustful dialog and enriched by creative and pro-active ideas of our engineering team, we include all aspects of a solution's life-cycle and aim to achieve the best overall results for our customers.

## BRUNNER ELEKTRONIK AG

**Development, production and customer services at the highest level: this describes the business activities of BRUNNER Elektronik AG and our motivation to convince every customer with individualized controls, drives and components. Also, we are proud of supporting our customers with complex integrated solutions and our own innovative and strong simulation product portfolio.**

As a modern family-owned technology company we are a powerful and reliable partner of numerous companies in different industries and markets for more than 40 years now. Our ability to handle all corporate core processes, from development to production and customer support, fully in-house creates sustainable advantages for our customers and partners: short response times, high flexibility and an integral understanding of quality. Our engaged and highly qualified employees share our enthusiasm for working for our customers, take over responsibility and live the values of team spirit and fairness.

**We pay attention to the environment and the ecological use of resources.**
